Overview

3D Printer:

3D printer is a device that creates three-dimensional objects from a digital file. It is a type of additive manufacturing technology. The 3D printer uses a process called fused deposition modeling (FDM) to create objects. The process involves extruding a thermoplastic filament through a heated nozzle, which then builds the object layer by layer. The 3D printer is used in a variety of industries, including manufacturing, engineering, and education. It is a versatile tool that can be used to create a wide range of objects, from simple prototypes to complex, functional parts.
