## QA

Q	It looks a lot like the 1100-RFZS when you read the specs, the only difference I can see is this model has a paper cutter on it. Also this machine has the words "Multi-Function" in the name and the RFZS model does not. What does this term mean. Are they made by the same company and if so is one model newer than the other. Thank You
A	<p>The FMJ-1100-ZD model is more intellectualized than FMJ-1100-RFZS:It has paper cutter device and laminating counter,this is also why it called "Multi-Function".It is made by the same company,and this model is the upgrade product,thanks.</p> <p>Reply by <a href="#">sign-in-china</a></p>
Q	For one thing the ZD weights 264 lb more than the RFZS so there is a lot more than just being more intellectualized. I would like to know what method is used to heat the rollers on both models, some blow hot air through the roller and some have a replaceable element inside the roller while others have the element right inside the silicone part of the roller. And why the ZD is so much heavier than the RFZS.

A

It is through Infrared quartz tube to heat the rollers. The FMJ-1100-ZD model has the below parts but FMJ-1100-RFZS doesn't have: 1 Auxiliary glue roller; 2 paper cutter device; 3 laminating counter. So ZD weights more than RFZS model.
