Power indicator lamp

Test button

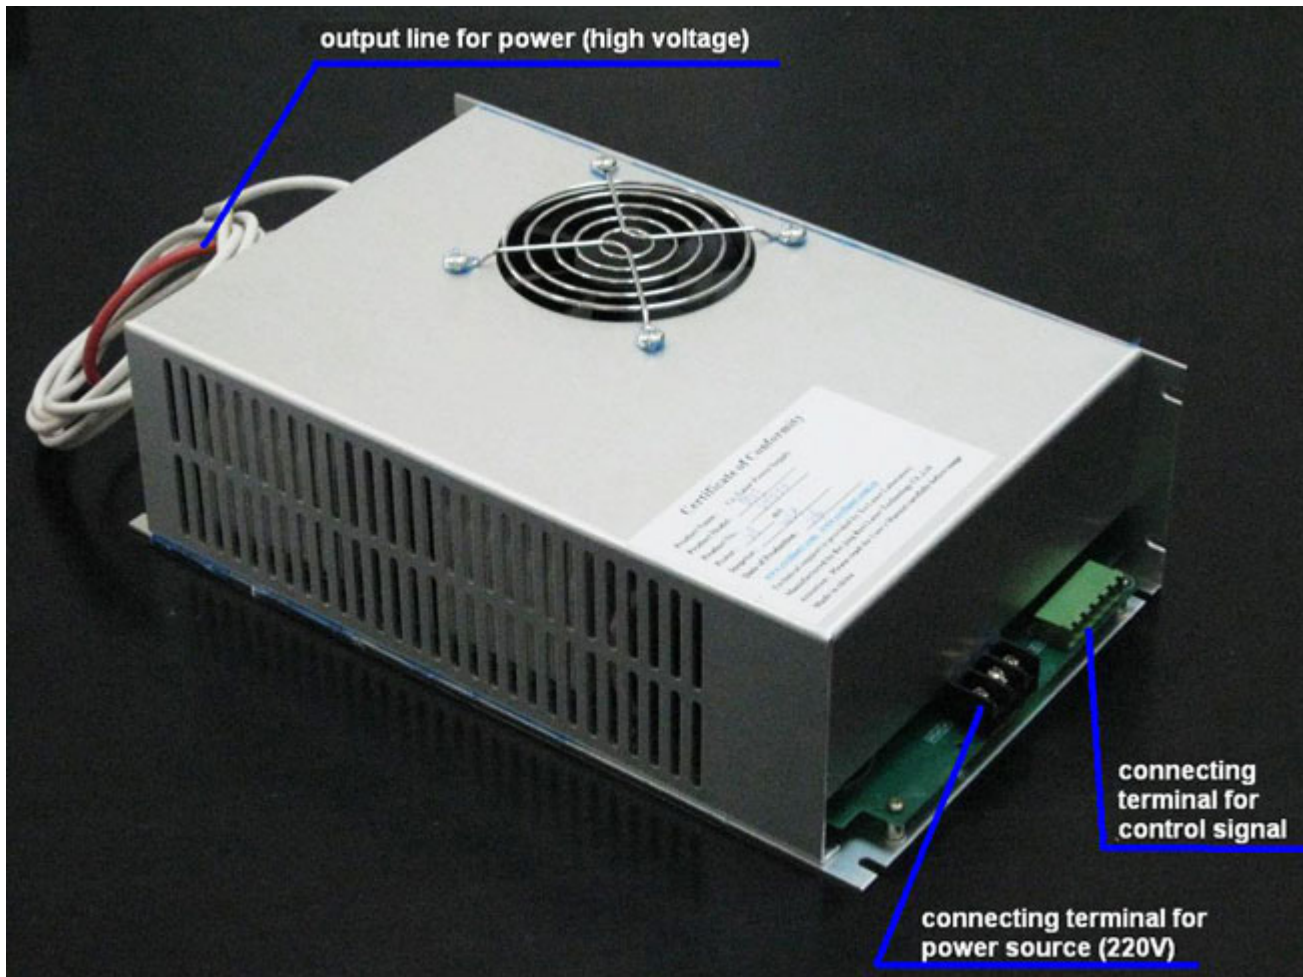

Laser indicator lamp

potentiometer

Function 1: To match the input signal and the output current, for example, 0-5V (input signal) could be related with 0-34mA (output current) or 0-2V could be related with 0-34mA.

Function 2: To limit the max. output current, when the potentiometer is turned anticlockwise. This function is only in effect when the analog input signal is 0-5V.
