## 2

# Turn-on Camera

1. Keep and stay with good signal of WiFi, turn on the camera and its indicative light flickers.
2. Launch the UCCAM program and it will prompts a message saying a new camera found, then search the device and connect.
3. The camera supports multiple terminal connections such as PC, Android, iPhone, etc. can connect and view at the same time.

# Usage

The camera requires the remote party at the site of machine maintenance to connect a high speed WiFi. Its first generation is designed as a head-set that is portable and easy in operation.

There is no location requirement or area limit to the remote connection terminal, you can see the situation of machine running anytime and anywhere as long as there is high speed network, and the engineer can guide the user how to operate and make its maintenance easy and simple through the remote connection terminal.

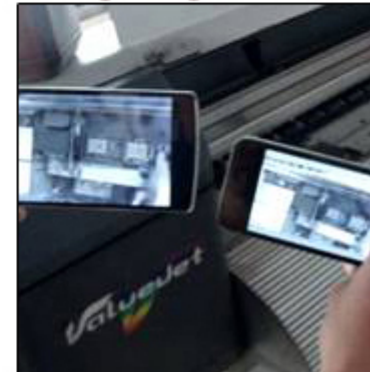

Mount on the Camera

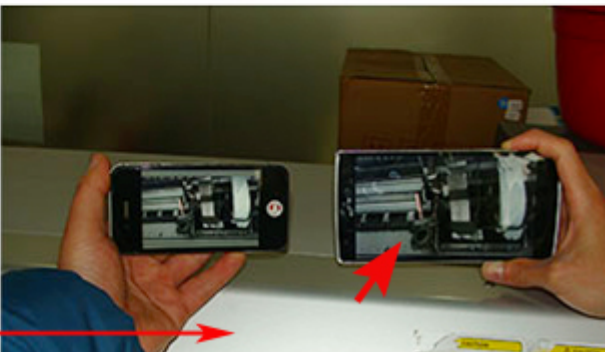

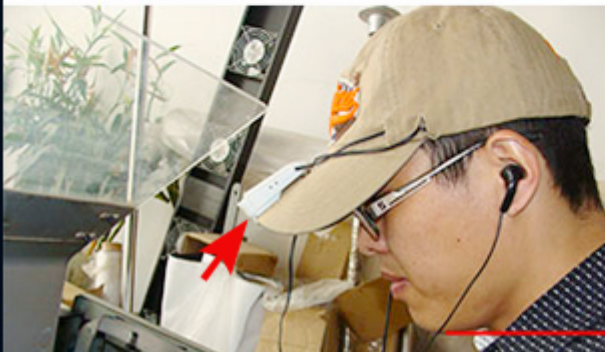

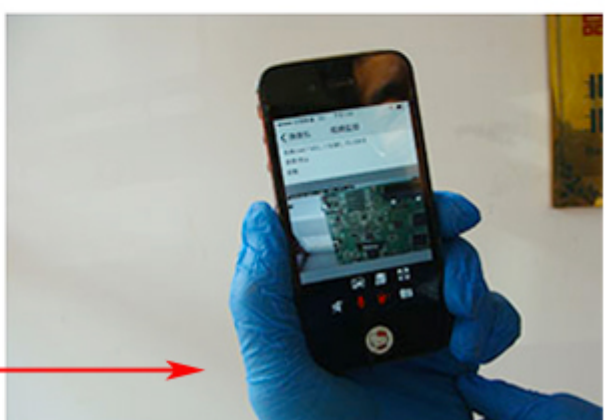

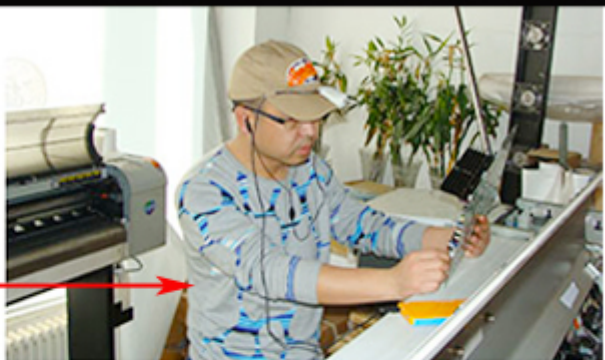

Set the camera facing the target machine

The senior engineers start guiding
