### Overview

#### Descriptions:

This heat transfer film is especially for 3D sublimation printing. One of the most important elements of sublimation and used by 3D sublimation heat press machine. Enables the absorption of the dye in the correct measure, achieving images with intense and vivid colours. The film can printing anywhere of the plates or phone cases even side curved edges because it can full wrapped the items. The 3D transfer film can be used instead of 3D vacuum heat transfer film. It is used together with 3D vacuum heat press machine, such as HTM-ST2030.

#### Features:

- Format: Sheet
- Size: A4(210\*297\*0.2mm)
- Quantity: 10sheets
- Rough surface that permits higher dye loads, achieving maximum quality transfers and vivid colours.
- Maximum quality of image transfer.
- Optimal paper thickness for better elasticity and adaptation to the cases
- This film will work on 3D vacuum heat presses and can be used to produce items such as full wrap phone cases and plates.

#### Application:

This 3D sublimation heat transfer film can be used to transfer images on ceramic plates and phone cases for full transfer printing.
