Overview

Product Highlights:

- . The woodworking CNC router uses an advanced DSP numerical controlling system, more ergonomically designed for convenient operation with the handle, large screen displays, , and simple maintenance.
- . Optimization of mechanical and electrical design to ensure good performance.
- . Furnished with high inverter-driven spindle motor cooled by water.
- . Gear wheel transmission applied to the Y direction, dual engines and high-power driven, guarantee the speed and power. - X, Y, Z direction using bolt pole transmission to ensure the precision in the process.
- . Unique intelligent calculation fully develops the potential of the engine and leads to high processing speed, the synchronization of curves and straight lines, smoother curves. Traveling high speed can reach up to 10m (394")/min.
- . Unique and dynamic renewal of the system enables the customer (according to different processing requirements) to change the controlling ability of the system, and effectively improves the processing efficiency (start operation with the instructions of the technician from `factory` or agent)
- . 32M saving capacity can store more than 3 processing files simultaneously, and read one at random.
- . Connected with the computer via USB interface to enable data transmission in a second. It supports hot plug and play with Window98/NT/2000/XP OS.
- . More compatible: CAD/CAM software like type3, artcam, castmate, proe, UG, wentai software, etc.
