Overview

B grade acrylic sheet uses the 90% PMMA material, Taiwan's equipment and is casting by the excellent mold. - The type acrylic sheet is the most widely used of all acrylic grades in today's market. Its superb clarity, rigidity and surface hardness make it the ideal choice for signage, glazing and fabricating.

We have 22 and more kinds of Grand-B boards with different thicknesses from 0.1" (2mm) to 1.0" (25mm). And the size is 48.0"*94.5" (1220*2400mm).

Features:

- . Better impact strength than glass (10x greater).
- . Easily Fabricated, thermoformed, polished or machined.
- . Excellent Optical Quality.
- . High Surface Hardness.
- . Excellent Light Transmission.
- . Chemical resistance to common acids, alkalis, salt spray, petroleum oils and greases.

Applications:

- . Outdoor/indoor signage, POP.
- . Outdoor lighting and shields.
- . Display cabinets.
- . POS displays.
- . Brochure holders.
- . Automotive parts--Headlight protectors and bonnet protectors
