Overview

Features:

This film is transparent on the surface and with a very delicate sense of hazy fog. This film used in the photographs, books and other surface of the books, play a role of protecting the books.

After laminating the film, the photo looks more elegant and as if there are layers of mist gently separated from `the` pattern. This film, as the surface is composed of some super-fine sand and at the same surface, the sand is small that generally the naked eye can not see any matte, if touching; we still can not feel rough, but a bit smoother.
