This machine could transfer colorful photos, words on cap, suitable for producing gifts, decorations.

Handle

Pressure adjust

Controller

Power Switch

Heating board

Working table

Cap holding device

Specification:

1. Digital controller, more accurate

2. Swing-away design makes using more easy

3. Easy to adjust the pressure

4. Heating board more safe and durable

Cap Press Machine HTM-CP815B (new clock)

Usage

1. Place printing material on working table; get right pressure you need take out material
2. Turn on power, about 10 sec then you could set Controller to get right temp and time you need
3. Then the machine will heat up (200℃ about 15 minutes)
4. After machine reach temp you set, then place cap on the working table flatly, place the photo you printing on cap, then press down the handle. When the machine reaches the time you set, it will alarm, you could take out the cap and peel off the paper, and then photo will transfer on the cap.

⚠ Attention

If the paper is cold peel, then you need to wait 15-20 sec and peel off paper. If it is hot peel, then you need to peel off paper at once after printing. (Had better peel paper in diagonal line)
Successful printing needs right time, temp and pressure, you need to test printing to get right time and temp first

Problem and solve

Machine not working	Check the power or Fuse inside
Heating board not working burn	clock problem/solid relay system not working/heating board
Not alarm	clock problem or time switch broken

Parameters

Voltage:　220V、110V

Time range：　0-999 sec

Power：　450W

Temp range：　0-399℃

Printing size：　8cm×15cm

Package：　640mm (L)×480mm(W)×380mm(H)

Weight：　10KG

Time and Temp Setting

1. turn on power

Press "ok" button display P-1, adjust the temp you need

Press "ok" button again, display P-2, adjust the time you need

Press "ok" button once more to finish

Press "ok" button once more to finish setting.

When the machine　close, it　will start to　timing, then you do not need to press ENTER
