2. Digital controller makes setting more accurate.
3. Special front pressure adjust more convenient.
4. Automatic alarm when reaching time you set.
5. Thicker heating board safe and durable.
6. Heating board add coating on the surface, easy to cleaning and not stick.
7. High quality silicon sheet bear high temp.

Usage

Heat Press Machine HP3804-B New Clock

1. Open heating board, place the materials on the working table, then test the pressure to get right pressure you need.
2. Turn on power, the controller will check automatically, after 10 sec then you could set the parameter you need.
3. After setting, the machine will heating up (200°C about 15 minutes)
4. When the machine reaching the temp you set, then place material on the working table, press down the handle. When the buzzer sound you could lift the handle up, then take out the material.

The function of the controller is complex, pls don't press any button for other operation unless you set up the temp, otherwise the process of the controller will be damaged !!!

Attention:

If the paper is cold peel, then you need to wait 15-20 sec and peel off paper. If it is hot peel, then you need to peel off paper at once after printing. (had better peel paper in diagonal line)
Successful printing needs right time, temp and pressure, You need to test printing to get right time and temp first

Problem and solve

Machine not working
Heating board not working
burn
Not alarm
Hard to open the board

Check the power or Fuse inside
clock problem/solid relay system not working/heating board
