

How to refill the pretreatment

Open the top cover

This is the
pump

Please check the tube connect to the pump is empty or not

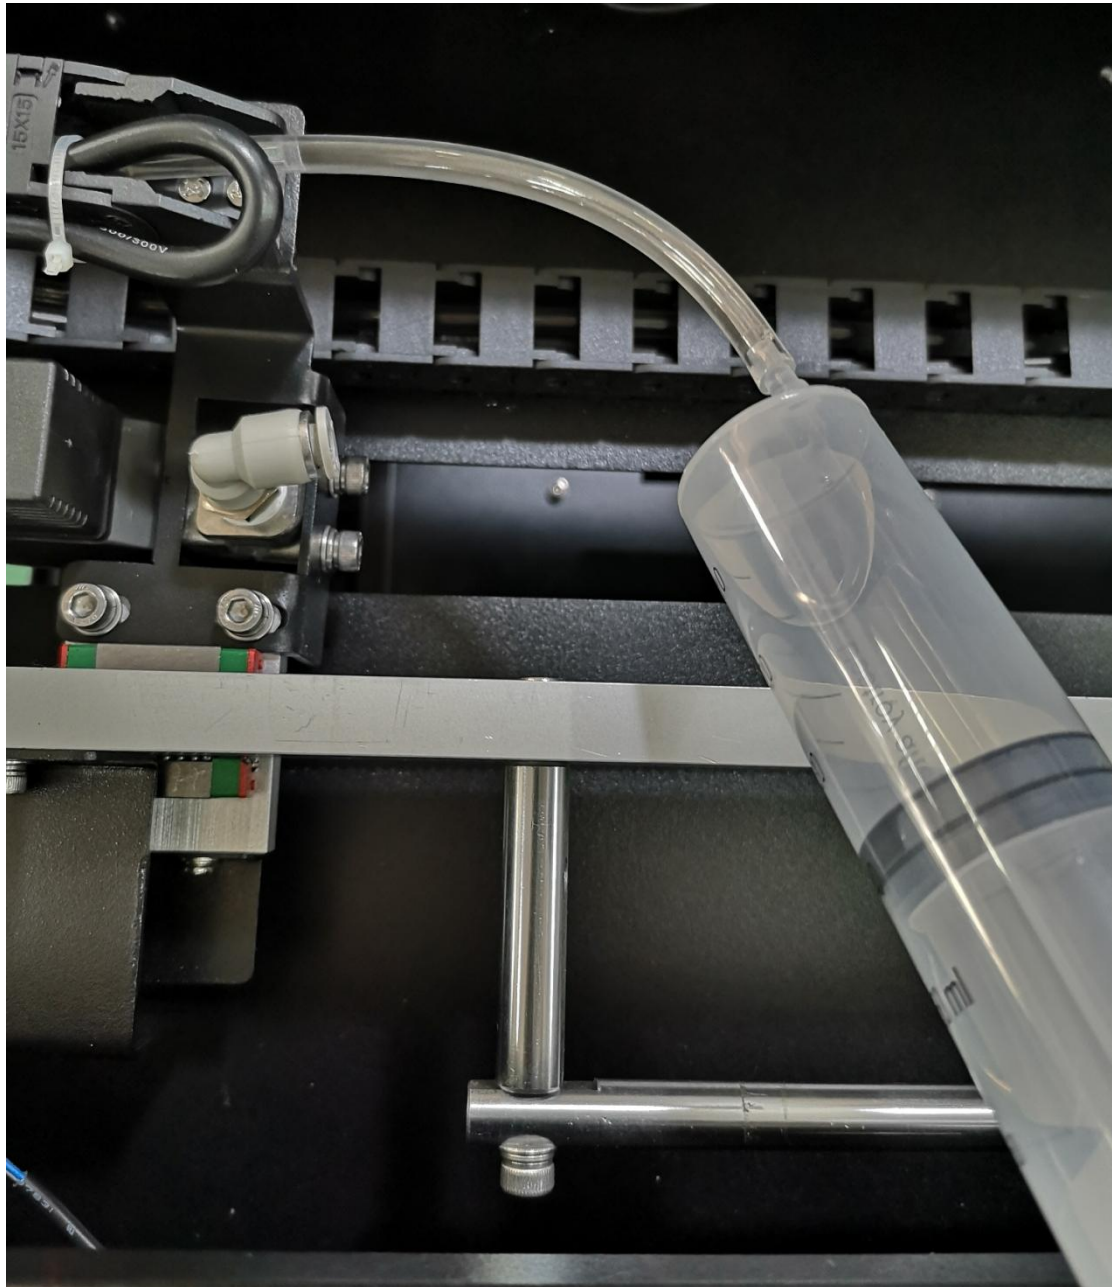

If the tube is empty, So the pump inside will be enough air then the pump will be no power can not suck the pretreatment from the

bottle to the spray head

Please do like below picture

This is the quick connector , Pull off the tube from the quick connector

Use the injection to suck up the water or pretreatment manually

Then reconnect the tube to the quick connect again

Now please confirm the water or pretreatment is full in the pump
and the tube inside the train

Do the clean function, the Pump will be more power and spraying will be Okey again
